
WhatsApp Customer
FastAPI Gateway
Redis Queue
Celery Worker
PostgreSQL DB
spaCy NLU
Monniepoint MFB
Phase 1: Ingestion & Fast Acknowledgment
1 Inbound Webhook: "I won pay for order 4599"
2 Push payload to `whatsapp_inbound`
3 200 OK (Timeout Prevented)
Phase 2: State Hydration & Intent
4 Consume inbound event
5 Fetch active `chat_sessions`
6 Parse unstructured text
7 Intent: `initiate_checkout` | Entity: `4599`
Phase 3: Payment Orchestration
8 Create Payment Link
9 Reference ID & URL
10 Update session state to `awaiting_payment`
11 Outbound API: "Click here to pay..."
...Customer switches to banking app...
Phase 4: Deterministic Reconciliation
12 Inbound Webhook: Payment Success
13 Push payload to `payment_inbound`
14 200 OK
15 Consume payment event
16 Match reference in `ledger_transactions`
17 Mark `settled` & insert double-entry `ledger_entries`
Phase 5: Outbound Resolution
18 Wake up dormant `chat_session` using metadata
19 Outbound API: Verified PDF Receipt
20 Update session state to `closed`
